Post Transformational Leadership on Leading Change for Successful Madrasah in Malang East Java Indonesia

Muhammad Walid and Fitratul Uyun
Universitas Islam Negeri Maulana Malik Ibrahim Malang

Keywords: Post Transformational Leadership, Leading Change, Madrasah.

Abstract: This research investigates the practice of madrasah principle leadership in managing changes. The foci of this research are the process of an event. In details, it is about obtaining an in-depth understanding about how is the foundation practice of head of madrasah in managing successful madrasah. This research applied the qualitative approach (study case). Data were collected through some techniques, which are in-depth interview, semi-involved observation, and documentation. Then, the obtained data is analyzed by using descriptive qualitative technique (data on a website) and comparative analysis (data from various websites). To measure the validity of the obtained data, the researcher used some standards, such as: credibility, transferability, dependability, and confirmability. Leadership in managing changes in madrasah had some principles, they are: (a) analyzing and identifying the performance of madrasah to respond toward organizational situation in creating the need of changes; (b) distributing authority and decision making process by building and strengthening the team of change coalition; (c) setting direction of madrasah which covers building and disseminating vision and mission, creating consensus about goals and priorities, and building high expectation of madrasah performance; (d) inspiring acceptable understanding about education and schooling through the strategic implementation to accomplish goals and creating an effective learning in organization; (e) building madrasah capacity, both personality and professionalism to broaden changes and madrasah development by developing human resources; (f) stimulating appreciation to increase commitment towards madrasah development through short-term-achievement celebration; (g) redesigning organization, identifying, creating, maintaining, and modifying structure of decision making process to consolidate changes; (h) building the collaborative culture which encourages the involvement of school stakeholders in order to strengthen the result of changes.

1 INTRODUCTION

The background of this study is the worry towards the existence of Islamic Education institutions, especially madrasah. Besides pesantren, madrasah is one of the most substantial Islamic education institutions in Indonesia. The existence of madrasah is so crucial to create high qualified young generation who are not only excellent in general knowledge, but also in understanding Islamic knowledge. It has significant role in creating excellent Indonesian young generation by far.

However, the quality of madrasah in Indonesia is quite distressing (Azra 2000). In fact, Muslim community in Indonesia are so passionate to hold Islamic education. It is indicated by the total number of madrasah in Indonesia, which is quite high. Nevertheless, their passion about Islamic education is contrast to their performance in managing madrasah, especially in term of professionalism. Further, it creates a big gap between the quality and quantity of madrasah.

When we track back the history of madrasah in Indonesia, it is undeniable that they were developed by Muslim community and they are designed completely based on their belief. Everyone within the community has contribution to develop madrasah. Therefore, it can be concluded that Indonesian Muslim community implemented the concept of community-based education. This fact also explains why the quality of madrasah in Indonesia is mediocre or even low. However, the passion of Indonesian Muslim community has been beneficial for Indonesia. By now, because of their effort, there have been many madrasahs all over Indonesia, in form of public and private madrasah.
Post Transformational Leadership on Leading Change for Successful Madrasah in Malang East Java Indonesia

(Azra 2000). Statistic reveals, there are more private madrasah than public madrasah (Azra 2000).

Those data show how big the passion and the independence of Indonesian Muslim community in hold education through the development madrasah is. They succeeded in creating madrasah for all school level so students can accomplish the nine year of compulsory education in Indonesia, covering MI (Madrasah Ibtidaiyah or primary school), MTs (Madrasah Tsanawiyah or middle school), and MA (Madrasah Aliyah or senior high school). However, unfortunately those efforts have not been supported by good school (madrasah) management, teachers’ professionalism, and other internal factors such as curriculum development, learning system, human resources, and funding resources. Later, it created problems and gaps in education which held by madrasah in Indonesia.

Nevertheless, not all madrasah in Indonesia is poorly rated. Some of them are good, either from its achievement, management, and facilities. Steenbrink, in one of his studies about Islamic education institutions in Indonesia, concluded that these days, madrasah Indonesia started to be able to compete with other regular schools. The availability of high quality madrasah in some of capital cities in Indonesia, such as MIN “Para Juara” in Malang, East Java, shows that madrasah can perform as great as regular schools, or even better (Steenbrink 1994). That kind of madrasahs prove that they can compete with, not only madrasah under the authority of Ministry of Religion, but also general schools under the authority of Ministry of Education and Culture, both academically and non-academically (Djojonegoro 1998; Sergiovanni 1987).

From the above description, there were two questions rising: why do some madrasahs are successful, while others fail? And further, why those madrasahs can be successful, while others fail in achieving their goals?

Most reformation in madrasah happens when its principal and its academic staff can change status quo to a better stage. This is based on a research outcome which shows that one of the greatest factor in succeeding school transformation is the leadership skill of its principal, since he is the agent and manager of change. This is in accordance to a study which was done by Edmond (1979) about school. It was found in his study that schools which have progressive achievement are mostly lead by a great principal (Edmonds 1979). Tobroni (2005) also stated that there is a significant relationship between effective organization and effective leadership. In addition, Edmond also stated that an organization which has dynamic change is mostly lead by a great principle who always attempt to improve his achievement (Edmonds 1979). Hallinger and Leithwood, in their study, later concluded that an effective school is led by an effective principle as well (Hallinger et al. 2005). The result of Borko, Wolf, Simone, and Uchiyama’s study (2003) revealed that leadership hold such a crucial role and become a main factor which encourage the success of school reformation (Borko et al. 2003). In addition, Fullan (1993) also stated that school principal is the agent of school transformation (Fullan 2012). Puter as cited by Sergiovanni (Sergiovanni 1987), drawn a conclusion that principle is the main key within the effort of increasing the quality of students. To sum up, all those findings shows that principal or head of madrasah is a leader and the most crucial agent of change at schools.

Based on the explanations, it can be concluded that the achievement of madrasahs is mostly determined by school principals, as the agent of change. Leithwood & Riehl (Leithwood & Riehl 2003), Hill (2002), (Leithwood et al. 2004) in their studies concluded that the factors determined the achievement of a school in general are students’ achievement and principals. A more detailed explanation is available below:

The effect of educational leadership towards students’ achievement is undeniably existed. However, it is not directly seen and functioning through the betterment of organization variables, such as school mission or goals, curriculum, and learning activities. However, when it is viewed from the viewpoint of quantitative approach, it can be estimated that the effects aren’t always invisible and variables of leadership can explain the important proportion related to school and students’ learning achievement (Leithwood et al. 2004).

Even though the effect is not directly seen, but it does significantly existed. In their review about how leadership affect students’ learning, it is stated that from all factors that affect students learning achievement in schools, the existed findings guide us to a conclusion where leadership is only one level below learning process in classrooms (Leithwood et al. 2004).

In recent times, there are many research about leadership at schools in various contexts. One of research which pay attention towards leadership at schools is International Successful Principalship Project (ISSPP). This project involves seven countries, they are: Australia, China, Denmark, UK, Norway, Sweden, and the US. This project results
some important findings about the characteristics of a successful principal (Day et al. 2000). Leithwood and Riehl (Leithwood & Riehl 2003), believe that kind of principal shows some basic dimensions of transformational leadership, such as great in directing school development, developing human resources, and redesign organization. That kind of principal is also depicted as having strong personal values and characteristics, professional, and equipped by the ability to analyze and suit his leadership with the unique school contexts. Based on those findings, the characteristics of principalship which found by ISSPP gives such a great contribution towards a betterment of leadership at schools.

ISSPP shows some differences between the characteristics and practice of leadership which are implemented by principals. The differences cover the focus and priority within their leadership, characteristics, and style (Leithwood 2005). The researchers believe those differences are affected by different situation and contexts, depends on where the principalship is applied. Be it in public or private schools, rural area or downtown, primary schools or senior high schools, religiously-affiliated schools or general schools, and Asia or Europe, East, West, or Central. This is in accordance with the general theory of leadership: leadership depends on the context (contingency theory of leadership) (Fiedler 1993).

Eventhough, later, it is found that different school context has massive effect towards the establishment of leadership characteristics and practice, the ISSPP project only result successful principalship only in western school context. Asia which is represented by China is not much different from other Asian countries, such as Japan, Malaysia, Korea, and even Indonesia itself. The differences between China and other Asian countries cover political, economics, sociocultural, and even, religion matters in Indonesia context as the largest Islamic country (Hallinger et al. 2005). The lack of information about Asia and other contexts has limit Indonesian teachers’ understanding about the viewpoint of school leadership globally and transformative school leadership.

There are a lot of studies about school leadership which result findings about various leadership characteristics. However, the writer found that there are just a small number of research which focus on school leadership in the context of madrasah in Indonesia. In fact, knowledge about this area is so crucial in filling that empty room and finding the best leadership model and practice for the development of madrasah in Indonesia. Besides, study about leadership in madrasah can also be beneficial for knowledge development in school leadership in developing countries, such as Indonesia, or even for the whole Asia.

Madrasah which considered successful in Indonesia is used as the sample and the focus of this study. That madrasah is The Public Madrasah Ibtidaiyah (MIN) of Malang. The success of MIN Malang both academically and non-academically is greatly recognized in Indonesia. MIN Malang even already gained some achievements in International competition. For five years, this madrasah even become a pilot model for schools and madrasahs in Indonesia. It is even nominated as one of the most favorite madrasah between 6.533 madrasahs in Indonesia.

A British management expert, Roger Gill, once stated that the determiner of success within an organization depends on its change management and change leadership. Gill also believe good management of change is sine-qua-non (Gill 2002). In addition, he states that while change must be well managed, it also requires effective leadership to be successfully introduced and sustained (Gill 2002). Therefore, once we found a successful madrasah, we need to analyze how the way of principal leadership is implemented in managing change, not only on his leadership style and characteristics.

From those backgrounds, it can be concluded that the focus of this research is madrasah principal leadership in managing change in a successful madrasah in Malang. In detail, this research studied the practice of madrasah principle leadership in managing changes. Research question in this study are how is the practice of madrasah principal leadership in managing change, starts from the stage of unfreezing, changing, and refreezing.

2 METHOD

The focuses of this study are the process of an event, or in details, it is about getting an in-depth understanding about how is the principalship practice of head of madrasah in managing successful madrasahs. Therefore, it can be said that this research applied the qualitative approach (study case). Madrasah is chosen as the research object because there are still a little number of research in Indonesia which investigate successful madrasah. Most researcher tend to study general school.

Data is collected through some techniques, which are in-depth interview, semi-involved
observation, and documentation. Then, the obtained data is analyzed by using descriptive qualitative technique (data on a website) and comparative analysis (data from various websites. To measure the validity of the obtained data, the researcher use some standards, such as: 1) credibility, 2) transferability, 3) dependability, and 4) confirmability.

3 RESULT AND ANALYSIS

3.1 Creation of the Urgent Madrasahh Transformation

The practice of madrasah principalship in creating and building the urgent change in successful madrasahs, can be done by analyzing and identifying the performance of madrasahs to respond organizational situation in creating the changes of needs. This can be explained in the Table 2 as follows.

<table>
<thead>
<tr>
<th>Sub-Theme</th>
</tr>
</thead>
<tbody>
<tr>
<td>Realizing the changes of needs; comparing the achievement of one madrasah to another’s social changes which related to school (MBS, IT-based learning); looking at the performance of madrasahs/achievement expectation (internal analysis and external analysis; comparing the performance of the pioneers; and digging worker’s expectation).</td>
</tr>
<tr>
<td>The sources of changes; madrasah principal; bottom up; vice principals and subject coordinators; teachers and other staff at schools.</td>
</tr>
</tbody>
</table>

Table1: The Creation of the Urgent Madrasahh Transformation.

3.2 Creating Changes Coalition Teams

The practice of madrasah principalship in managing changes, especially in terms of the creation or the strengthening of changes coalition team can be done through distributing authorities and decision making process by building the changes coalition teams. Table 3 shows that madrasahs can change by creating changes coalition teams in the first place.

<table>
<thead>
<tr>
<th>Sub-Theme</th>
</tr>
</thead>
<tbody>
<tr>
<td>Creating changes coalition teams; strengthening the roles of vice principals.</td>
</tr>
<tr>
<td>Strategies for strengthening the changes coalition teams; nourishing the sense of belonging; attention, motivating, and the actualization recognition; expectation management; establishing effective communication; consolidation and coordination of the changes coalition teams.</td>
</tr>
</tbody>
</table>

Table2: Strengthening Changes Coalition Teams.

Madrasah principals assumed that the process of decision making should be the focus in madrasah transformation. Madrasah principals practice their principalship by giving opportunities for madrasah community to increase the organizational effectiveness which based on the values of democracy, and put school-based management as a priority where stakeholders share leadership. Besides, that kind of participative leadership can improve school capacity to respond productively to the demand of changes, both from internal and external aspects. Participative leadership requires the ability of madrasah principal to communicate with their coalition team to create and improve the sense of belonging.

3.3 Visioning

Themadrasah principals also show their principalship practice, especially in the stage of improving vision, by setting the direction of madrasah which covers building mutual visions, creating consensus about goals and priorities, and setting high expectation of high achievement.
Table 1: Strategies for Achieving Visions.

<table>
<thead>
<tr>
<th>Sub-Theme</th>
<th>Academic</th>
<th>Non-Academic</th>
</tr>
</thead>
<tbody>
<tr>
<td>The urgency of vision; guiding and monitoring all the elements of madrasahs to achieve those visions and missions; using visions as the focal point in driving madrasah; packing the visions with the basics of Islam as the special characteristics of madrasah.</td>
<td>the implementation and development of K-13, IT-based learning, students learning through Mathematics and Science Club (MSC), and the improvement of teachers’ qualification by requiring them having a master degree</td>
<td>Extracurricular activities and IMTAQ activities</td>
</tr>
<tr>
<td>Vision dissemination; formal (general meeting, etc.); informal (sudden inspection, individual supervision) and non-formal (day out to madrasah neighborhood, website, leaflet). The object of vision dissemination: teachers, class coordinators, workers, janitor, security officer, and parents.</td>
<td>Other supportive elements; discipline members of madrasah; motivating member of madrasah to gain better and better achievement and quality; the improvement of school facilities for students</td>
<td></td>
</tr>
</tbody>
</table>

3.4 Strategies for Visions Achievement

Madrasah principal can perform the practice of leadership by giving inspiration on good knowledge about education and school through strategies of vision achieving and creating an effective learning organization.

Therefore, madrasah leaders have showed the understanding towards the importance of that kind of development to achieve better students’ outcome. Students’ better outcome which can be measured, is like national examination. National examination itself is a main thing for every madrasah principal and members of other madrasah community. Therefore, some of academic strategies which can be used, such as additional learning time, try out, and preparation for national examination, are compiled to meet the demand of society in improving the result of national examination. These all are the short-term strategies. Thus, madrasah principal has such an important role in compiling and communicating school goals, creating expectations and standards, coordinating curriculum, evaluating instructional activities, and broadening students’ opportunities to learn. Madrasah leaders should have an adequate skill to control their madrasahs. The better their skill and knowledge about educational and learning matters, the stronger the impact is.

Allah swt has given an analogy in the Holy Koran, or in details, in surah al-Mulk: 1 as follows:

"مَا أَبْدَعَ الَّذِي بَدَّلَ الْأَمْلَ أَيْلَامَ وَهُوَ الْخَيْرُ الْمُجْرِمُ "

which means:

"He who is nothing in this world is the most exalted, and he is the one who is most exalted."

2922
Blessed is He in whose hand is dominion, and He is over all things competent.

In other words, those madrasah principals are the real example of strategic leaders. They implemented some strategies to realize the visions of madrasah which they created. It is obvious that the establishment of visions and strategies of madrasah are based on their belief and affected by their personal experience and understanding (Yukl 2013). They go hand in hand with other members of madrasah, under the new paradigm of participative management, compile strategies which can be implemented effectively. They are consistent with their definition and other members as well about madrasah success so they introduce some kinds of academic and non-academic strategies to increase students’ achievement. Some supportive strategies are also compiled to do continuous analysis towards the programs and performance of madrasah.

3.5 Broadening the Actions of Changes through Empowerment

From those findings about the broadening of changes through empowerment, madrasah principals implement the practice of building madrasah capacity, both personally and professionally to broaden the development of madrasah.

Table 5: Broadening the Actions of Changes Through Empowerment.

<table>
<thead>
<tr>
<th>Sub-Theme</th>
</tr>
</thead>
<tbody>
<tr>
<td>Developing human resources; workshop; Seminar; Updating knowledge on their own; Study tour; idea sharing; religious approach; kinship approach; Individual supervision</td>
</tr>
</tbody>
</table>

Therefore, building madrasah capacity, which becomes the focus of most madrasah principals, covers personal and professional, and even organizational capacity. Personal and professional capacity is related to madrasah principal, vice principal, teachers and non-teacher staff. Those aspects of madrasah capacity shows such an in-depth concern towards the professionalism development of teachers and staffs. Each madrasah principal shows future professional development for teachers and staffs, which called by in-service training. In-service training for teachers and staffs covers workshop, seminar, idea sharing, sister school, and so forth.

3.6 Creating Short Term Success

Madrasah principal also do other practice of leadership, which is using rewards to improve teachers’ commitment in developing madrasah through the celebration of short term success.

Table 6: Creating Short Term Success.

<table>
<thead>
<tr>
<th>Sub-Theme</th>
</tr>
</thead>
<tbody>
<tr>
<td>Celebrating success; verbal appreciation, social appreciation, scholarship awarding, financial reward, trophy, school trip, position promotion for teachers, pursuing master degree</td>
</tr>
</tbody>
</table>

Madrasah principal uses rewards as a process of transaction, where leaders give reward to workers. Therefore, giving them motivation, including individual rewards and support will be beneficial for both parties. Teachers and staffs will feel that their leaders pay attention to them and that makes them feel more comfortable to work in the madrasahs. Maslow’s theory about motivation supports prosperity development from principal to teachers and staffs. And, at the end of the day, madrasah principals have implemented the main dimension of transformational leadership by giving motivation to teachers and students, and improving their commitment towards the madrasah development (Bass 1985).

3.7 Consolidating Actions for Changes

From the earlier findings about consolidating actions for changes, then it can be concluded that practices which can be done are redesigning the structure of the organization; identifying, creating, maintaining, and modifying the structure for mutual decision making in consolidating the changes of madrasah.

Table 7: Consolidating Changes

<table>
<thead>
<tr>
<th>Sub-Theme</th>
</tr>
</thead>
<tbody>
<tr>
<td>Utilizing madrasah culture for changes; teachers who have master degree; commitment of all members of madrasah; support from madrasah committee and stakeholders; department of education can be responsive</td>
</tr>
<tr>
<td>Changing support system; member mindset; changing visions of madrasah; structure of organization; creating and strengthening Standard of Procedure (SOP)</td>
</tr>
</tbody>
</table>

Consolidation of changes can be in form of utilization of madrasah culture for changes, and
support system changes; member mindset; changing visions of madrasah; structure of organization; creating and strengthening Standard of Procedure (SOP). Even though there is not vision changes in MAN Embun Pagi, but at least they already perform strengthening of madrasah culture; discipline, religious, and equip madrasah with proper and adequate facilities. Therefore, the changes of behavior of madrasah members is something which must be inside the social organization, such as madrasah. In the future, a successful madrasah is a madrasah where the behavior of its members is always having commitment and capacity to learn continuously and the madrasah principal itself also successful in creating madrasah as an effective learning organization.

Structure changes and people who have roles in those changes are example of the effort of madrasah principle in giving authority to teachers and staffs through authority distribution and mutual decision making process. This fact strengthens the finding about transformational leadership where principals are successful in creating the structure and mutual decision making process. The process of authority distribution indicates the implementation of contingency leadership, which can be helpful in solving problems, such as motivation, decision making, organizational transformation, organizational culture, and conflict management.

3.8 Strengthening and Maintaining the Result of Changes

From the previous explanation about strengthen and maintaining the result of changes, it can be concluded that the practice of the madrasah principles is building collaborative culture which involve schools’ stakeholders to gain more changes.

Table 8: Strengthen and Maintaining the Result of Changes.

<table>
<thead>
<tr>
<th>Sub-Theme</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Evaluation</td>
</tr>
<tr>
<td>2. Istiqamah</td>
</tr>
<tr>
<td>3. Earlier preparation</td>
</tr>
<tr>
<td>4. Emotional closeness</td>
</tr>
<tr>
<td>5. Strategies development</td>
</tr>
<tr>
<td>6. Collaboration with third-party</td>
</tr>
</tbody>
</table>

Madrasah principals show their skills in developing and building collaboration, not only with the member of madrasah community, but also with the other parties outside madrasah. This skill is going together with the madrasah-based management in which principals are given a kind of freedom to make decision about the madrasahs. The successful madrasah leaders tend to be able to make great connections with many different segments of society. They are close to stakeholder alliances, varied connections, etc. All these collaborative effort is meant to gain higher achievement for the madrasah itself (participative leadership).

Because the strategic leaders can evaluate their programs and strategies while they were being implemented, madrasah principals in this studies also do the same. They show their ability in analyzing and evaluating their own context of madrasah. Each of them can read different kinds of situation, the weakness, the strength of madrasah, expectation of different segment of community towards madrasahs, and so forth. They compile appropriate strategies and evaluate it continuously.

4 DISCUSSION

Finally, based on this study which focus on madrasah as an Islamic educational institution, it can be concluded that the leadership of madrasah principal in successfully managing madrasahs in different countries result in the creation of post-transformational leadership theory. It is because all the findings show that they all beyond simply transformational leadership in the version of Burn, Bass and Yukl, and any other leadership models (visionary, managerial, moralist, substantial, educational, and instructional leadership) as explained in the following diagram.

The early dimension of transformational leadership in the version of Burn and Bass tends to be Leader-Followers Oriented, in which the leader takes his own actions to increase the awareness of other colleagues about what matters. Also, he/she did it to encourage them to go beyond their personal intention for the sake of improving the organization. Transformational leadership reflects the interest transcendence of leaders and followers. While transformative leadership is only related to how to inspire and gain commitment from followers. In the other hand, transformational leadership tends to focus on the exchange of appreciation between leaders and followers (transactional).

While the model of Yukl transformational leadership put more attention on behavioral approaches, which highlight three principles, they are: first, setting the goals of organization together; second, developing human resources, which covers providing individual support, offering intellectual
stimulation, and giving examples on great and important values and practices; third, redesigning an organization and building a collaborative culture.

Figure 1: Post Transformational Leadership.

The model of post-transformational leadership goes beyond the model limitation of that transformational leadership, which is by analyzing and identifying madrasah performance to respond the organizational situation in creating the need of changes; distributing authorities and decision making process by building and strengthening the team of changes coalition; setting the direction of madrasah which covers building and disseminating mutual vision and mission, creating consensus about aims and priorities, and building high expectation of performance; inspiring great knowledge about education and schooling through the implementation of strategies to accomplish goals and creating an effective learning organization; building madrasah capacity, both personally and professionally and it can be done through developing human resources in madrasah; stimulating appreciation to increase commitment towards madrasah development; redesigning organization; identifying, creating, maintaining, and modifying the structure of mutual decision making process. So, it is not only about setting the direction of the organization, developing human resources, and redesigning organization (as the theory from Yukl), and different from the concept from Burn and Bass about the leader-followers oriented concept.

This study also strengthens the theory about successful leadership, which is value-led contingency leadership, in which the practices of school leadership in managing changes at successful school, by based on personal, professional, and humanity values and belief. Value-led contingencyindicates that school leadership is centered at human with all aspects entitled to them such as humanity, religion, and so forth, rather than management system and market demand. Meanwhile, madrasah principals who were studied have implemented the dimensions of leadership such as values and visions, team work, cooperation and suitability of values and visions owned by leaders and followers, integrity, consistency and integrity owned by principals, context, fast response towards what happened inside and outside the context, continuous professionalism development, authority is shared between team and individual, reflection, building a self-characteristic to act in a proper way, both by leaders and their staffs.

5 CONCLUSIONS

Leadership in managing changes in madrasah have some principles, they are: (a) analyzing and identifying the performance of madrasah to respond toward organizational situation in creating the need of changes; (b) distributing authority and decision making process by building and strengthening the team of changes coalition; (c) setting direction of madrasah which covers building and disseminating vision and mission, creating consensus about goals and priorities, and building high expectation of madrasah performance; (d) inspiring good understanding about education and schooling through the implementation of strategies to accomplish goals and creating an effective learning organization; (e) building madrasah capacity, both personal and professional to broaden changes and madrasah development by developing human resources; (f) stimulating appreciation to increase commitment towards madrasah development through short-term-achievement celebration; (g) redesigning organization, identifying, creating, maintaining, and modifying structure of decision making process to consolidate changes; (h) building the collaborative culture which encourages the involvement of school stakeholders in order to strengthen the result of changes.

Therefore, this study enriched and/or created a theory of post-transformational leadership, because the finding shows that the leadership in this study goes beyond the dimension of transformative leadership in the viewpoint of Burn, Bass, Yukl, and other models of leadership (visionary, managerial, participative, moralist, contingency, educational, and instructional leadership). The early model of Burn and Bass transformative leadership tend to be leader-followers oriented. Transformational leadership reflected the transcendence of leaders and followers. Transformational leadership is much related to how to
inspire and gain followers’ commitment. Transformational leadership puts more focus on the exchange of appreciation between leaders and followers (transactional). While the Yukl model of transformational leadership tends to use the behavioral approach, which highlight three main principles: first, setting goals together; second, developing human resources, covering providing individual support, offering intellectual stimulation, and giving examples on important values and practices; third, redesigning organization to build collaborative culture.

While the post-transformational leadership in this study goes beyond other models of transformational models. The model of the post-transformational leadership covers analyzing and identifying the performance of madrasah to respond toward organizational situation in creating the need of changes; distributing authority and decision making process by building and strengthening the team of changes coalition; setting direction of madrasah which covers building and disseminating vision and mission, creating consensus about goals and priorities, and building high expectation of madrasah performance; inspiring good understanding about education and schooling through the implementation of strategies to accomplish goals and creating an effective learning organization; building madrasah capacity, both personal and professional to broaden changes and madrasah development by developing human resources; stimulating appreciation to increase commitment towards madrasah development through short-term-achievement celebration; redesigning organization, identifying, creating, maintaining, and modifying structure of decision making process to consolidate changes; building the collaborative culture which encourages the involvement of school stakeholders in order to strengthen the result of changes.
